DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Shinada.

Shinada discloses a printing apparatus comprising an imaging surface (i.e. photoconductive element, Col. 2, lines 51-52); a charging device 10 for placing a charge on the imaging surface having a corona member 12 extending in an extending direction (Fig 2); a shuttle 34 movable along the extension direction including a cleaning member 38 for cleaning the corona member; a motor 30 for moving the shuttle along the extension direction; and control means for changing a direction of the motor in response to detecting a power consumption of the motor within a predetermined range (Col. 4, lines 26-31).

Shinada further discloses a converter 28 for converting a rotation motion of the motor to linear motion including a lead screw 32; the corona member including a wire, a screen 20 and is biased (Col. 2, lines 47-50); the control means detecting an increase in power consumption of the motor by an increase in current consumption (Col. 4, lines 26-31), the motor including a DC brush motor (Fig. 4); the control means measuring a time between an initiation of the motor and a condition of power consumption of the

motor relative to a predetermined range (Col. 4, lines 20-26); the control means reacting to a fault condition if the measured time between the initiation of the motor and the condition of power consumption of the motor is below a predestined threshold (Col. 4, lines 20-26); the charging device being a charge corotron (Col. 2, lines 38-40).
